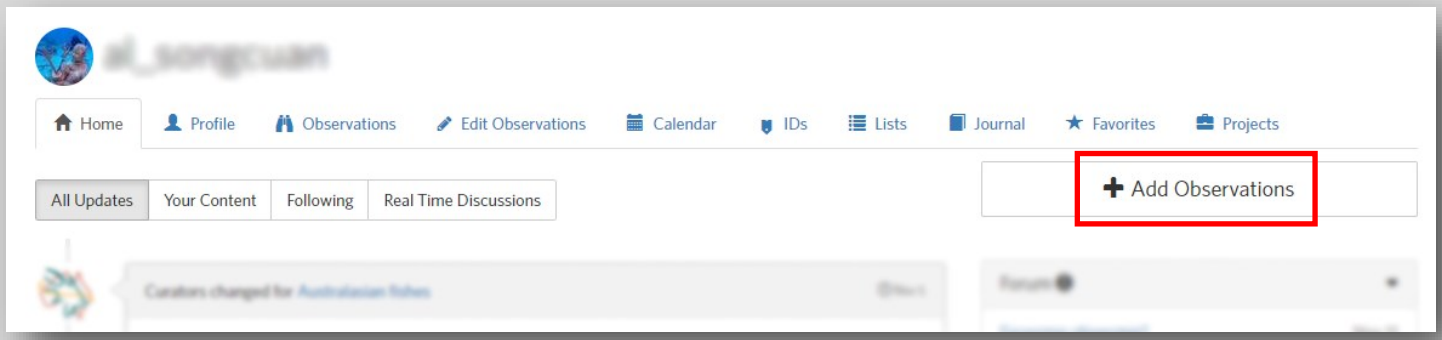
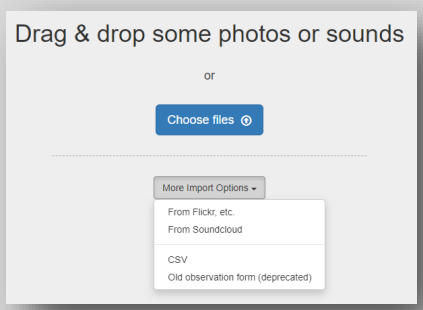
Collecting data

Step 1: On your profile home page, click on **Add Observation** button.



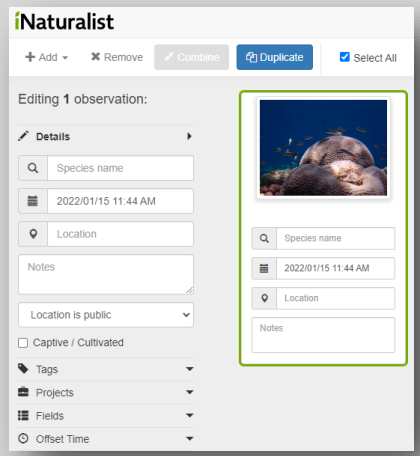
Step 2:

Choose photos you want to upload.

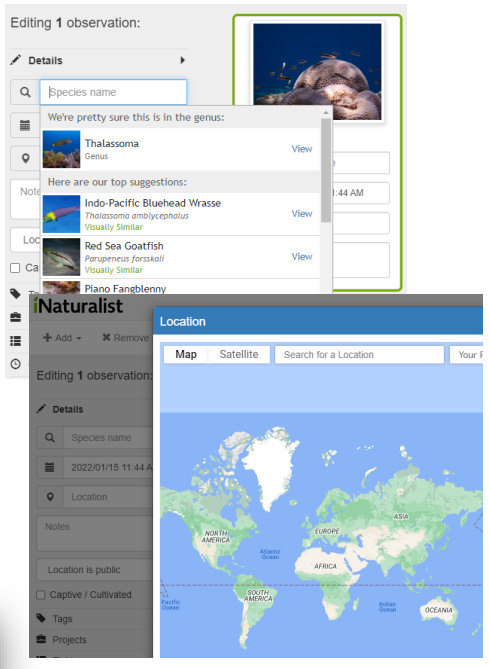


Step 3:

Fill in data such as species, location and project. Click submit to save your observation.

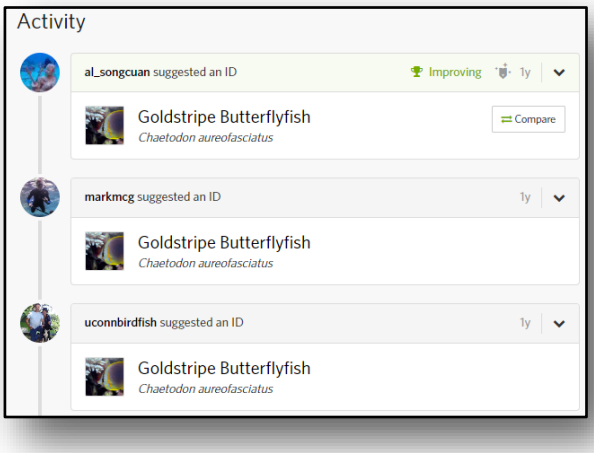


Species input will show suggested species based on uploaded image.



Step 4:

Once saved in your observation, the citizen science community can start suggesting or verifying your identification based on the image and details provided.



Location input will allow you to search or pin on the map the location where photo was taken.

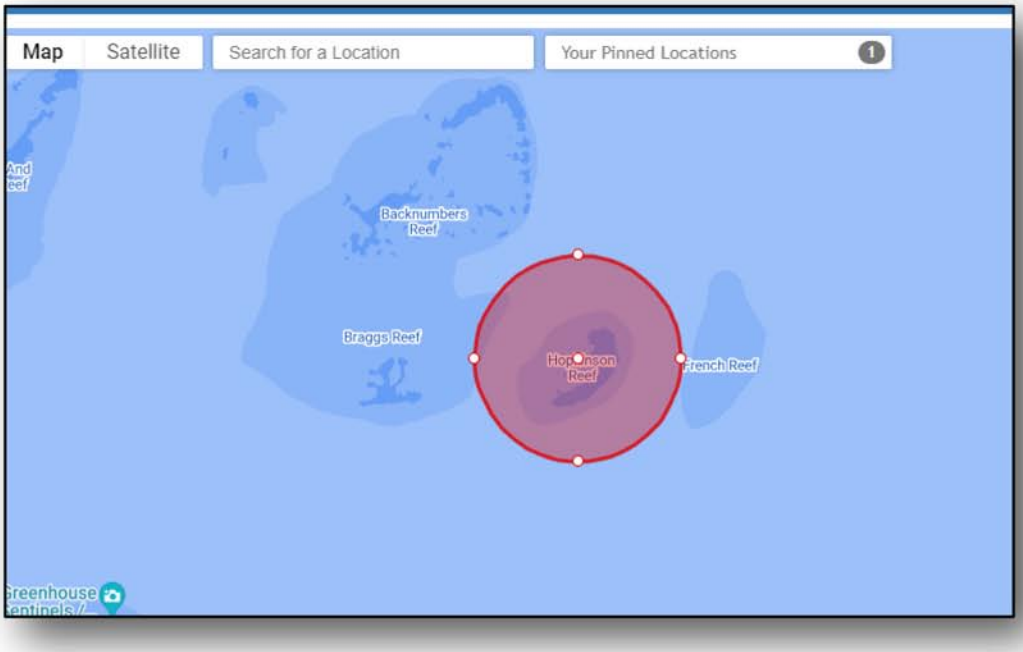
Tips

Tip 1: You can upload multiple observations at once.

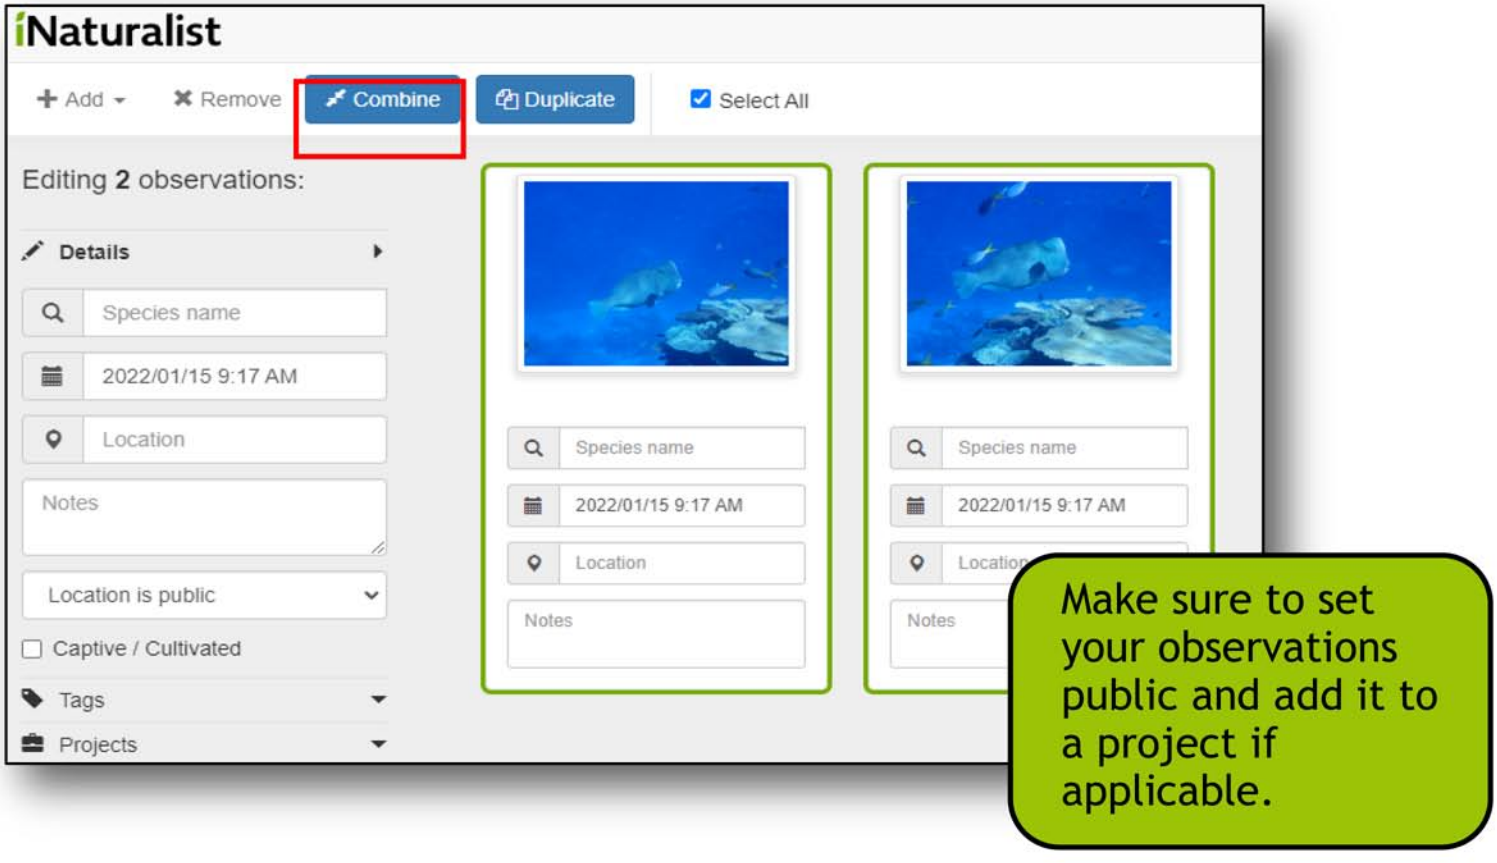
Tip 2:

You can manually add the location if known or pin it on the map. You can also adjust the radius of location if you are uncertain.



Tip 3:

For similar observations, you can select by holding CTRL button and clicking combine.



Make sure to set your observations public and add it to a project if applicable.
